

@ They liked the idea that they can access the data in two different views.

@ They liked the logo design for the software however:

@ They think the U of R colors for the theme is more delightful for them.

@ They said if they could download files based on GAs, it would be great.

@ For the first page the IDA map, they said if an instructor could see only his own related courses IDAs it would be better than seeing all the IDA map for all the courses at the same time.

@ Using tags is an interesting idea that Tim mentioned it and I think we should think how to use this idea into our design. It is interesting that after explaining how tags work, they had a very positive reaction about it.

---

Next step actions based on the customer's notes:

- 1- Change in the theme (priority: 3.5/5)
- 2- GA based file download (priority: 5/5)
- 3- Using tag idea in the design (priority: 3/5)
- 4- Fixing IDA map for instructor view (priority: 5/5)
